Additional legal description is on page \_\_\_\_\_ of the document.

**Assessor's Property Tax Parcel/Account Number:**

This Notice is placed in order to notify potential interested parties of the status of the drinking water supply.

The source of supply for this property is an individual surface water or spring water source. Section 4.20.040 of the Chelan-Douglas Health District Code requires that individual surface water sources be provided with continuous disinfection.

The most commonly used types of disinfection equipment are filters, ultraviolet lights and chlorinators. These will remove most bacteria and viruses that can cause water borne disease. However, such equipment is not designed to remove protozoan cysts (Giardia, Cryptosporidia), which are sometimes associated with surface water-borne diseases. The Chelan-Douglas Health District recommends the installation of additional equipment designed to remove these organisms. Equipment should meet the requirements of the National Sanitation Foundation
